CAREER SUMMARY

An experienced data analyst with strong self-starter mindset adapted over 4 years working in scale-ups, evolving brand-new roles at both Third Space and HelloFresh. Influenced strategic decision-making of senior leadership while transforming large datasets from multiple complex systems into deliverable insights with predictive capability. With a clear focus on end-user requirements I led technical adoption and design in a multi-product SaaS implementation project in a fast-growing business. I am committed to growing in data analytics, expanding my technical skills in AI adoption and modelling inside and outside of work.

TECHNICAL SKILLS

- **Software:** Power BI, R Studio Power Automate, Azure, GitHub, Excel
- **Programming:** DAX, SQL, Python, R, JavaScript

EDUCATION & QUALIFICATIONS

BSc Psychology, Coventry University

September 2019 – June 2022

- Achieved first in BSc (Hons) Psychology undergraduate programme accredited by British Psychological Society, emphasizing critical analysis and quantitative research - group testing (T-test, ANOVA) and regression analysis (single, multiple) using SPSS. Final project investigated investment decision-making abilities and bias influence on young adults.

Computer Science, HarvardX

November 2025 - April 2026

- Applied R, SQL, Python, Java and web technologies over the 6-month course. Developed SPA web app for a final project which transformed social deduction games into digital experience with graphical UI, user management, interactive game mechanics hosted on GitHub, with Postgres database deployed on Supabase. Modules included *Programming with Python*, *Artificial Intelligence with Python*, *Programming with R* and *Databases with SQL*.

WORK EXPERIENCE

People & Systems Analyst, Third Space

June 2023 – present

- Data Engineering - Extensive knowledge in data modelling and visualisation using Power BI and integrated Azure feed from HRIS, ATS & LMS systems. Built data pipelines and automated ETL processes. Operationalised and developed business KPIs for senior leadership published via trackers and dashboards with row-level security. Transformed raw data using SQL and DAX into predictive metrics and presented impactful insights to both business support and operations teams.

- Data Analytics – Translating data into decisions and strategies: Identified risk zones for attrition helping define engagement strategies achieving 20% drop enabling headcount growth while scaling; Predicted and budgeted benefit plan changes to company sick pay with MAPE of <10% across 2 years; Projected hiring volume expectations by modelling expected attrition, internal mobility and growth factors.
- Reporting – Cyclical reporting and modelling including Gender Pay Gap, Annual Compensation Review, Annual Bonus, Compliance and Investor Report.
- Workflow Design – Partnered with business support and operational heads to iteratively challenge and improve existing processes and data flows: Minimised business risk and cut cost while designing adequate flows for software and hardware issuing and collection with IT Director; Uncovered audit gaps saving £30k+ on ex-employee club memberships collaborating with Head of Memberships; Brought hiring clarity by visualising personal trainer class target vs headcount potential promoting data-driven recruitment planning.
- Project Management – Key technical SME in 3-phased SaaS implementation (HRIS+LMS, ATS, T&A) involved in a full-scope project from system selection stage to change management. Accountable for assessing software, managing integrations, data mapping, transformation & migration, and UAT while working in close collaboration with both external consultants and wider business.
- System Management – Ownership of system configuration and process change, overseeing data integrity & accuracy while dealing with senior management across 5+ departments to improve and document BAU workflows and coordinate technical integrations (APIs, FTPs) with vendors.

Recruitment Consultant, Frazer Jones

September 2022 – May 2023

- Recruitment Management - Managed a portfolio of candidates and owned the full recruitment cycle from candidate sourcing to clients negotiations.
- Business Development - Sought business development opportunities via direct reach and market analysis focusing on payroll within commerce, retail and industry

People Data Administrator, HelloFresh

January 2022 – September 2022

- Process Design - Automating processes involving large HR datasets of 2,000 employees, focusing on operation labour absence management and time attendance, holidays, and sick pay using and advanced Excel VBA/MACRO programming.
- Reporting - Generated HR operational reports, and analysed HR data – regularly presented these in visual form/ dashboards to People Partners and Head of People while navigating past and future trends.
- Systems Integration - Developed macro-data trackers using spreadsheets and integrated it with G-Suite and T&A system Bodet to enable ongoing absence management. This allowed for investigation into 200 cases achieving a 45% reduction in AWOL absence (20% to 11%).
- Employee Relations – Counselling operation management team on absence review cases with direct involvement in investigations and disciplinary hearings.

PROJECTS

Webb App – Town of Salem ([LINK](#))

- Software Engineering - Full-stack development of a simple social game at the start of 2026 inspired by games such as Mafia or Werewolf. Fully running on JavaScript and HTML, server hosted on GitHub with database deployed on Supabase.

LLM Pipeline – Team Engagement Analysis ([LINK](#))

- Data Science - Developed an automated pipeline for statistical analysis in R that ingests engagement survey datasets and executes regression modelling.
- AI Integration - Integrated a local Llama LLM model to synthesize statistical testing into annotated insights-driven PDF reports, replacing manual interpretation workflows.
